The purpose of the experiment is to investigate whether each function of the web page works well *[state the general aim of the experiment]*. Developers need to judge the usability of a web page by its users, so we need to experiment *[explain why you need the involvement of other people]*. I will introduce the whole system and then ask you to test it on the web page *[describe what will happen in the experiment]*. In the process, I will do a computer screen recording to capture how long you need to perform each task *[describe what data will be collected]*. If you are unsure about anything, please feel free to ask questions and let me know when you're done *[explain what interaction the participant may have with you during the experiment]*.

I will ask you some questions after the experiment *[describe what will happen in the experiment]*. Please note that my ultimate goal is to evaluate the system; this is not a competency test *[reassure the participant that this is not a test of ability]*. You are welcome to quit the experiment at any time *[state that the participant may withdraw at anytime]*.

Do you agree to participate in this evaluation? *[seek explicit consent]*. Do you have any questions before we begin? *[allow the participant to ask questions]*.
